EDUCATION

Ph.D., Electrical and Systems Engineering **Expected Sep 2019**
University of Pennsylvania 3.48 GPA

Doctoral student and Research Assistant in Vijay Kumar's lab. Performed research in micro unmanned aircraft systems (UAVs), served as a Teaching Assistant for two courses, and mentored an undergraduate student in research.

M.S.E., Robotics **Dec 2018**
University of Pennsylvania 3.60 GPA

B.S., Mechanical Engineering **2009-2014**
Clemson University 3.97 GPA, Summa Cum Laude

As an honors undergraduate research assistant, I worked on software development for aerial robot control using Robot Operating System (ROS). My senior project was on the design of an embedded system used to classify BMW Automotive components as damaged/undamaged using audio digital signal processing techniques.

RESEARCH EXPERIENCE

Graduate Research Assistant **2014-present**
University of Pennsylvania Philadelphia, PA

Did research in modeling, state estimation and control for quadrotors subject to aerodynamics effects. Demonstrated that modeling aerodynamic effects can improve tracking performance. Showed that these effects, combined with an IMU, can be used to estimate velocity and orientation in a drift-free manner.

Research Intern **May-Aug 2013**
Air Force Research Laboratory Kirtland AFB, Albuquerque, NM

Research on system identification, state estimation and control for differential drive robots emulating satellite motion. Implemented an extended Kalman filter and an unscented Kalman filter for estimating the position and orientation of the robot. Also implemented a closed-loop nonlinear control law to get the robot to orbit a fixed point.

Undergraduate Research Assistant **2013-2014**
Clemson University Clemson, SC

Used C++ and Robot Operating System (ROS) to control different types of robots inside and outside of simulation. Built a quadrotor simulator in Python and used it to study control of robots from across the country over a computer network.

SKILLS

Programming C++, Python, Java, Matlab

Applications Git, Robot Operating System, Mathematica, L^AT_EX, SolidWorks

JOURNAL PUBLICATIONS

1. J. Svacha, G. Loianno and V. Kumar, “Inertial Yaw-Independent Velocity and Attitude Estimation for High-Speed Quadrotor Flight,” in *IEEE Robotics and Automation Letters*, vol. 4, no. 2, pp. 1109-1116, April 2019.

CONFERENCE PROCEEDINGS

Taylor, and Vijay Kumar. “Experiments in Fast, Autonomous, GPS-Denied Quadrotor Flight,” 2018 IEEE International Conference on Robotics and Automation (ICRA), Brisbane, QLD, 2018, pp. 7832-7839.

ADVISORY ROLES

Yifan Xu

Undergraduate Researcher

Provided guidance, design and programming assistance as he designed an “Autonomous and Self-Sustained Recharging Station for Pelican Quadrotors.”

Summer 2015-Spring 2016

University of Pennsylvania

D. Carillo, T. Das, T. Ramadoss, D. Vaske

Senior Design Team

Met regularly with these students to provide guidance for their project, which was to implement an autonomous recharging quadrotor platform to charge smaller quadrotors.

Fall 2017 - Spring 2018

University of Pennsylvania

TEACHING EXPERIENCE

MEAM 620 - Advanced Robotics

Spring 2017, Spring 2018

Teaching Assistant

University of Pennsylvania

Held office hours to help students with programming and homework assignments. Wrote assignment solutions. Graded homeworks and exams.

EAS 205 - Applications of Scientific Computation

Fall 2016

Teaching Assistant

University of Pennsylvania

Designed an autograder for projects which I had solved prior. Held office hours where I answered student questions and explained class concepts

Aerial Robotics

Spring 2016

Teaching Staff

Coursera (University of Pennsylvania)

Answered questions on forums, dealt with technical issues and bugs in our autograder, and developed lecture material for inertial measurement units in quadrotor UAVs
